EXPERIENCE

Amazon Web Services (via APSSDC) **2024**
Cloud Engineering Intern

- Configured six AWS services (EC2, S3, IAM, Lambda, API Gateway, DynamoDB) to power event-driven application flows.
- Replaced an always-on backend with a serverless Lambda, API Gateway, and DynamoDB data path, trimming idle infrastructure.
- Enforced least-privilege IAM policies and set up CloudWatch monitoring for continuous health visibility.

PROJECTS

Cloud Data Engineering Pipeline: Retail Analytics|Live Demo|GitHub **2026**
Python, Apache Beam, DuckDB, BigQuery, Streamlit

- Engineered an idempotent ELT workflow that screens retail CSV/JSON files for missing IDs, negative prices or quantities, malformed dates, and excess discounts.
- Diverted faulty and repeated rows (84 of 1,200 in the sample batch) into a quarantine table labeled with machine-readable reason codes, so healthy records keep moving.
- Masked customer emails, derived gross, net, tax, and total revenue, then upserted results through a BigQuery staging-table MERGE, leaving row counts unchanged on reruns.
- Modeled a date-partitioned, region-clustered warehouse schema; shipped an 8-query SQL suite and a Streamlit dashboard with a live SQL workbench.

Customer Churn Prediction System: Telecom ML|Live Demo|GitHub **2026**
Python, Scikit-learn, XGBoost, Pandas, Plotly, Streamlit

- Built a leakage-safe preprocessing flow for the IBM Telco dataset (7,043 customers), housing imputation, scaling, and one-hot encoding inside a ColumnTransformer.
- Compared a baseline, Logistic Regression, Random Forest, and XGBoost through 5-fold stratified cross-validation; picked cost-weighted XGBoost to prioritize catching churners.
- Reached 0.8434 ROC-AUC and 78.88% recall on 1,409 unseen customers; released a Streamlit app that scores churn risk instantly and proposes retention offers.

AI Resume Analyzer: Career Intelligence Platform|Live Demo|GtHub **2026**
Next.js, React, TypeScript, Gemini API

- Created an explainable career-intelligence platform with deterministic ATS scoring, skill-gap roadmaps, and mock interview practice.
- Mapped candidate strengths through an interactive SVG Job DNA view and a Career Twin alignment feature, so every score comes with visible reasoning.

StudyCircle v2: Real-Time Collaborative Learning Platform (Team Lead)|Live Demo|GitHub **2026**
Next.js, React, TypeScript, Node.js, PostgreSQL, Socket.io, JWT/OAuth

- Architected live study rooms and shared notes on a normalized PostgreSQL schema, guarded by JWT/OAuth sign-in and role-based permissions.
- Guided a three-person team across system design, REST development, and split hosting on Vercel and Render.

EDUCATION

Aditya College of Engineering & Technology (ACET) **May 2027**
Bachelor of Technology, Information Technology — Surampalem, Andhra Pradesh

- CGPA 8.30/10. Coursework: Database Systems, Data Structures & Algorithms, Cloud Computing, Operating Systems, Networks

OTHER

- **Technical Skills:** Python, SQL, Java, JavaScript, TypeScript, C++; Apache Beam, DuckDB, BigQuery, Scikit-learn, XGBoost, Pandas; AWS, Spring Boot, Node.js, React, Next.js, Angular; PostgreSQL, MySQL, MongoDB, DynamoDB
- **Certifications & Training:** AWS Certified Cloud Practitioner; Google Data Analytics; HackerRank (Python, SQL, JavaScript); NPTEL Cloud Computing and IoT; Infosys Springboard Python Track
- **Achievements:** Solved 490+ problems on LeetCode and GeeksforGeeks; placed 599th nationwide in Unstop CodeClash 2025; reached Round 2 of EY Techathon; joined the Women Who Master Hackathon 2026
